## General Description

The AOZ1321DI is a P-channel high-side load switch with controlled slew rate. Three slew rate options are available. The AOZ1321DI-01L and AOZ1321DI-04L have slew rates of 800us. The AOZ1321DI-02L and AOZ1321DI -05L feature fast Slew Rate (less than 1 $\mu \mathrm{s}$ ). The slew rate of AOZ1321DI-03L and AOZ1321DI-06L is 100 $\mu \mathrm{s}$. The AOZ1321DI-03L, AOZ1321DI-04L, and AOZ1321DI-05L provide an output discharge circuit to quickly discharge the output when the switch is disabled.

The P-channel MOSFET has typical on resistance of $60 \mathrm{~m} \Omega$. The very low $\mathrm{R}_{\mathrm{DS}(\mathrm{ON})}$ significantly reduces the power path dissipation. The input voltage range of AOZ1321DI is from 1.6 V to 5.5 V . The control input is compatible with both TTL and CMOS logic. Ultra low quiescent current makes this product suitable for any portable applications.

The AOZ1321DI is available in 4 -pin $1.2 \times 1.6$ DFN package and is rated over the $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ ambient temperature range.

## Features

- 1.6 V to 5.5 V input voltage range
- Low $\mathrm{R}_{\mathrm{DS}(\mathrm{ON})}(60 \mathrm{~m} \Omega$ typical at 5 V )
- Controlled turn-on slew rate
- 800 1 s (AOZ1321DI-01L, -04L)
, 100 s (AOZ1321DI-03L, -06L)
, 1 $\mu \mathrm{s}$ (AOZ1321DI-02L, -05L)
- Output discharge function (-03L, -04L, -05L)
- Low quiescent current ( $1.0 \mu \mathrm{~A}$ typical)
- Low shutdown current (<1 $\mu \mathrm{A}$ )
- 4kV ESD Rating
- Tiny 1.2x1.6 DFN package

## Applications

- Cellular phones
- MP3 players
- Personal media players
- Notebook computers
- Digital still cameras
- Hot-swap applications

## Typical Application

## Ordering Information

| Part Number | Slew Rate | Output Discharge | Package | Environmental |
| :---: | :---: | :---: | :---: | :---: |
| AOZ1321DI-04L | $800 \mu \mathrm{~s}$ | Yes |  |  |
| AOZ1321DI-01L | $800 \mu \mathrm{~s}$ | No |  |  |
| AOZ1321DI-05L | $1 \mu \mathrm{~s}$ | $1.2 \times 1.6$ DFN-4 | Green Product |  |
| AOZ1321DI-02L | $1 \mu \mathrm{~s}$ |  |  |  |
| AOZ1321DI-03L | $100 \mu \mathrm{~s}$ |  |  |  |
| AOZ1321DI-06L | $100 \mu \mathrm{~s}$ | No |  |  |

- All AOS products are offered in packages with Pb-free plating and compliant to RoHS standards.
- Parts marked as Green Products (with "L" suffix) use reduced levels of Halogens, and are also RoHS compliant.

Please visit www.aosmd.com/web/quality/rohs_compliant.jsp for additional information.

## Pin Configuration

DFN-4 $1.2 \mathrm{~mm} \times 1.6 \mathrm{~mm}$
(Top View)

## Pin Description

| Pin Name | Pin Number | Pin Function |
| :---: | :---: | :--- |
| IN | 3 | Input. IN is the drain of the P-channel MOSFET. It is the supply input of the IC. |
| GND | 2 | Ground. |
| OUT | 1 | Output. OUT is the source of the P-channel MOSFET. |
| EN | 4 | Enable. The P-channel MOSFET turns on when EN is logic HIGH. |

## Absolute Maximum Ratings

Exceeding the Absolute Maximum ratings may damage the device.

| Parameter | Rating |
| :---: | :---: |
| Input Voltage ( $\mathrm{V}_{\text {IN }}$ ) | 6 V |
| Enable Voltage ( $\mathrm{V}_{\text {IN }}$ ) | 6 V |
| Continuous Drain Current (ID) $\begin{aligned} & \mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C} \\ & \mathrm{~T}_{\mathrm{A}}=85^{\circ} \mathrm{C} \\ & \hline \end{aligned}$ | $\begin{array}{r}  \pm 2 \mathrm{~A} \\ \pm 1.4 \mathrm{~A} \end{array}$ |
| Pulsed Drain Current (ldP) | $\pm 6 \mathrm{~A}$ |
| Continuous Diode Current ( $\mathrm{I}_{\mathrm{S}}$ ) | $-50 \mathrm{~mA}$ |
| Storage Temperature ( $\mathrm{T}_{\mathrm{S}}$ ) | $-55^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |
| ESD Rating ${ }^{(1)}$ | 4kV |

## Note:

1. Devices are inherently ESD sensitive, handling precautions are required. Human body model is a 100 pF capacitor discharging through a $1.5 \mathrm{k} \Omega$ resistor.

## Recommend Operating Ratings

The device is not guaranteed to operate beyond the Maximum Operating Ratings.

| Parameter | Rating |
| :--- | ---: |
| Input Voltage $\left(\mathrm{V}_{\mathrm{IN}}\right)$ | 1.6 V to 5.5 V |
| Junction Temperature $\left(\mathrm{T}_{\mathrm{J}}\right)$ | $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ |
| Package Thermal Resistance |  |
| $1.2 \times 1.6$ DFN-4 $\left(\Theta_{\mathrm{JA}}\right)$ | $143.17^{\circ} \mathrm{C} / \mathrm{W}$ |
| $1.2 \times 1.6$ DFN-4 $\left(\Theta_{\mathrm{JC}}\right)$ | $128.1^{\circ} \mathrm{C} / \mathrm{W}$ |

## Electrical Characteristics

$\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{IN}}=\mathrm{V}_{\mathrm{EN}}=5 \mathrm{~V}$, unless otherwise specified.

## Detailed Description

## Internal Discharge Resistor

The AOZ1321DI has an internal $160 \Omega$ resistor to discharge any remaining voltage from the system to the ground that is store in a capacitive load. This provides a safe shutdown of the system to prevent any damages to the devices. This function is controlled from the Enable pin.

## Slew Rate Control

The AOZ1321DI is a family of P-channel high-side load switches with controlled slew rate. The device is enabled when the EN pin is high. Once enabled, the gate driver and slew-rate control circuitry immediately raises the source-to-gate voltage of the P-channel MOSFET to its threshold level, and then gradually turns on the MOSFET by linearly increasing the source-to-gate voltage. This slow turn-on action effectively limits the input inrush current and provides a nice ramp for the output voltage. After the MOSFET is fully enhanced, the AOZ1321DI quickly increases the source-to-gate voltage to the full input voltage to minimize on resistance and reduce power dissipation.

Three slew-rate options are available. AOZ1321DI-01L and AOZ1321DI-04L have slew rate of 800us. This option significantly reduces the inrush current when the MOSFET turns on, allowing the use of very small input capacitor. AOZ1321DI-02L and -05L have no slew rate control and the MOSFET can be turned on within 1 us. This option is suitable for applications that require very fast switching. AOZ1321DI-03L and -06L have moderate slew rate to $100 \mu \mathrm{~s}$. The AOZ1321DI-03L, -04L and -05L options include an internal output discharge circuit that quickly discharges the output to ground when the device is disabled.

## On/Off Control

The AOZ1321DI is enabled when the EN pin is asserted high. The device is disabled when the EN pin is asserted low. The EN input is compatible with both TTL and CMOS logic.

## Applications Information

## Input Capacitor Selection

Use a $1 \mu \mathrm{~F}$ or larger capacitor for input bypassing. Place the capacitor close to the IN pins of AOZ1321DI.

## Output Capacitor Selection

Use a $0.1 \mu \mathrm{~F}$ or larger capacitor between OUT and GND. The capacitance does not affect the turn-on slew rate. However, a larger capacitor makes the initial turn-on transient smoother.

## Layout Guidelines

Good PCB is important for improving the thermal performance of AOZ1321DI. Place the input and output bypass capacitors close to the IN and OUT pins. The input and output PCB traces should be as wide as possible for the given PCB space. Use a ground plane to enhance the
power dissipation capability of the device. The AOZ1321DI evaluation board can be used as a layout example. The PCB layout of AOZ1321DI evaluation board is shown in Figure 3.

Figure 3. AOZ1321DI PCB Layout

## LIFE SUPPORT POLICY

ALPHA \& OMEGA SEMICONDUCTOR PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS.
As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
